

What Does your \$50.50 Sewer Bill Pay For?

Maintaining:

75 Miles of Sewer Main Lines

115 Miles of Sewer Laterals

1700+ Manholes

3 Pump Stations

1 Wastewater Treatment Plant

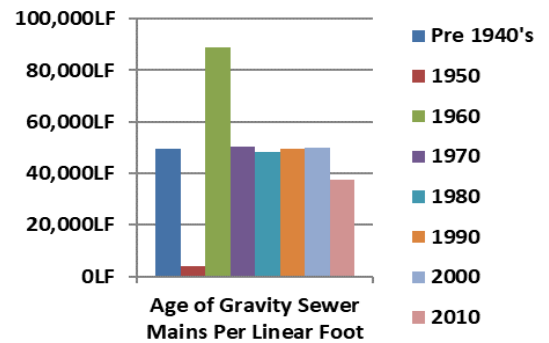

4600+ Customer Base

Continuation of Services

It is projected to cost 3.6 million dollars to operate the City's sewer system in 2021. This amount encompasses the operating costs of running the **sewer plant** 24/7. This includes: sewage treatment processes, quality control, manpower, assisting residents, resolving issues, maintaining infrastructure, and **administrative** costs to distribute/process bills and payments.

Capital Projects

A significant portion of the **sewer lines** throughout the City are nearing or exceeding the average useful life span of sanitary sewers as they were installed pre-1960. These lines are evaluated using CCTV inspection allowing staff to prioritize infrastructure needs, and plan for large scale rehabilitation efforts. In 2021 the City is projecting 1.4 million dollars in **capital** project expenditures.

Future Investments

Part of your bill helps to fund planning for projects that make sure the sewer system remains reliable and continues to meet Federal and State requirements. Often times these projects require the City to incur **debt**. This money is used for administration, planning, and construction directed toward replacing older pipes, improving treatment processes, and making infrastructure stronger, safer, and more efficient for years to come.
